RE: Reference Letter for Shivansh Mittal

This is to testify that Mr. Shivansh Mittal has been an employee of Dyson Singapore holding the position of Design Engineering Intern under the Haircare Research & Development Department for a period of 2nd August 2021 – 17th December 2021.

Dyson Ltd is a British technology company that designs and manufactures motors, bladeless fans, hair dryer, hand dryers and vacuum cleaners. It was founded in 1978 by James Dyson and has grown to be among the crème de la crème in its industry with thousands of customers in over 100 countries worldwide.

As a mechanical engineering undergraduate, he exhibited a passion to learn the ins and outs of the industry, constantly asking questions and paying attention to his work in order to maximise his learning throughout his employment. He demonstrated thinking on his feet and quickly adapted to problems faced in order to fulfil his assigned projects effectively. His primary tasks for the role were :

- Designing and building a life test equipment jig to record peak stress and predict fatigue & failure for a Dyson hair care product
- Assisting Lead and Design engineers with ad-hoc build duties and troubleshooting for engineering verification

Shivansh is a great team player, well-liked by his peers and always respectful to his seniors. He constantly seeks out opportunities to grow and contribute such as when took an avid interest in our Dyson initiatives such as joining Forward Dyson sustainability champions team, attending online company forums, proposing joint outreach activities with the Talent Acquisitions team and the James Dyson Foundation (JDF) and even volunteered to co-host the 2021 Diwali event for our Haircare Department.

He manages his time between his commitments responsibly to ensure that he doesn't get overworked, works sincerely and diligently to ensure that the job gets done on time and possesses strong communication and inter-personal skills. He is passionate towards learning and improves upon himself constantly, for the project assigned to him, he mastered CAD

software to design and build prototype. He also took self-initiative to pick up new skills like Arduino software and basic hardware skills (soldering, crimping etc) to work with advanced electrical components to give his best to the team. He is indeed a highly motivated Design Engineer and a committed employee.

We have no adverse records of employment with respect to Shivansh Mittal.

Your sincerely,

ShehNee Yeoh
Lead Design Engineer
Dyson Hair Care RDD
